# Question 118

Balaji

There is a Page called XML Schemas. Microsoft Docs that we can import any XML file to define the nodes in the XML file. References(<https://docs.microsoft.com/en-us/dynamics365/business-central/across-how-to-use-xml-schemas-to-prepare-data-exchange-definitions>)  
I imported an XML file(e.g. Profiles XML file from NAV Version) , but it is always giving the error.  
"A call to System.Xml.XmlElement.SelectNodes failed with this message: './:include' has an invalid token."
